

bioemitter farming systems

Trial report

Pigs

Mire Close Farm, Cowling, Keighley, N Yorks 2004-?

The bioemitter farming system (including vibrational essences and homeopathics) have been used at Mire Close farm in one format or another since 2004. Installed were a water enhancer, field bioemitter and pig shed bioemitter.

The farm is at 500-1000ft up in Pennines, and of traditional construction. No fertilizer, drugs or chemicals used.

During the operation of the bioemitter farming system Norman Bell consistently achieved:

- *extended growing season for grass (at least 2 weeks both ends of season)
- *best silage results both for the farm and for the district, in quality and quantity
- * achieved 0% salmonella on ZAP abattoir tests (UK average at that time about 26%, Normans before bioemitter installation a rolling 22%)
- * Healthy pigs with increased vitality and awareness
- * Superior tasting meat products with positive feedback from customers
- *
- * **The farm consistently achieves excellence in production without fertilizers, drugs or chemicals in a relatively poor upland area.**

Conclusions: The trial demonstrates that the bioemitter farming system applied to a whole farm produces benefits throughout, increases production and improves quality at little or no expense to the environment, reducing and/or eliminating conventional chemical systems. Salmonella can be eliminated from an environment by bioemitter farming system.
